2025/11/02 08:25 1/1 Integration based on RPC

## **Integration based on RPC**

- Classical client-server programming. The underlying socket solution remains hidden from developers.
- The channel is not only suitable for simple data transfer, remote execution of procedures also natively supported (on API level).
- Interface description
  - It is necessary to describe the remote procedures with some form of XDR (External Data Representation Standard) can help.
- Platform independence
  - Can be solved by the help of cross-platform interface descriptors
