Probability and Conditional Probability

Notation	Value	Formula
$P(A)$	Probability of event A occurring.	$P(A) = \frac{\text{Number of favorable outcomes for } A}{\text{Total number of possible outcomes}}$
$P(A \mid B)$	Conditional probability of event A occurring, given that event B has occurred.	$P(A \mid B) = \frac{P(A \cap B)}{P(B)}$
$P(A \cap B)$	Probability of both events A and B occurring.	In general: $P(A \cap B) = P(A) \cdot P(B \mid A)$ If A and B are independent events, then: $P(A \cap B) = P(A) \cdot P(B)$
$P(A \cup B)$	Probability that event A or event B (or both) occur.	$P(A \cup B) = P(A) + P(B) - P(A \cap B)$
