

# Technical Communication (GEIAK100-B2A)

|                               |                                                                                                                                                                                                                                                                                                                           |
|-------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Description</b>            | The main purpose of the course is to introduce students to the fundamental theories and methods of information systems. Topics include basic logic, number systems, systems theory, information representation, coding and encryption, semantics, modelling principles, and the fundamentals of computer-aided modelling. |
| <b>Semester</b>               | Autumn                                                                                                                                                                                                                                                                                                                    |
| <b>Neptun code</b>            | GEIAK100-B2A                                                                                                                                                                                                                                                                                                              |
| <b>Instructors</b>            | Dr. Károly Nehéz, Associate Professor<br>Áron Kiss, Teaching Assistant.                                                                                                                                                                                                                                                   |
| <b>Credit Hours</b>           | 2 hours lecture + 2 hours practice per week                                                                                                                                                                                                                                                                               |
| <b>Attendance Requirement</b> | Students are required to attend at least 60% of the scheduled classes to be eligible to receive the course signature.                                                                                                                                                                                                     |
| <b>Signature</b>              | Students must successfully complete two practical assignments and pass the midterm exam in order to obtain the course signature.                                                                                                                                                                                          |
| <b>Examination</b>            | The written examination consists of theoretical questions and practical tasks based on the course material.                                                                                                                                                                                                               |

## Lecture Notes

1. [Information - Basics](#)
2. [Information - Processing](#)
3. [Information - Coding](#)
4. [Information - Coding 2](#)
5. [Information - Syntax](#)
6. [Information - Semantics](#)
7. [Information - Encryption](#)

## Practices

1. [Mathematical Expressions in LaTeX](#)
2. [Basics of the HyperText Markup Language](#)
3. [Cascading Style Sheets](#)
4. [Interactive Practice of CSS](#)
5. OnShape Sketching:
  1. [OnShape - Introduction to Sketching](#)
6. OnShape Part Designing:
  1. [Model train \(document\)](#)
  2. [Designing a Model Train \(booklet\)](#)
  3. [Designing a Model Train \(video tutorial\)](#)
  4. **Homework:** [OnShape - Part Design Using Part Studios](#)
7. OnShape Assemblies:
  1. [Nutcracker assembly drawings](#)
  2. [START document](#)
    1. **Task:** Construct the *piston*, *connection*, and *handle* parts, then assemble the machine!
  3. [FINISHED document](#)
  4. **Homework:** [Onshape - Assemblies](#)

8. [Conditional Probability and Information Theory Exercises](#)
9. [Combinatorics Exercises](#)
10. [Encoding and Encryption Exercises](#)

## Additional Notes

1. [Formulas for Mathematical Exercises](#)
2. [Introduction to CAD course](#)

---
